About me

My hobbies includes tinkering with homeservers and jogging along Odense River.

Hans Askov

Software Engineer

Odense C, Region of Southern Denmark, Denmark

I'm Hans, a software engineer who specialize in fullstack web development and building systems that hold up under real load. I have built a production analytics platform ingesting 420M+ inspections a year, cutting dashboard load times by 100× and storage costs by 92%. Now looking to bring that performance and cost discipline to a backend or fullstack role.

Experience

TriVision A/S
2 years 4 months

Software Engineer - Odense

February 2024 - May 2026 • 10 months
Shipped Production Intelligence V4, a production analytics platform ingesting 420M+ machine vision inspections annually across TriVision's customer base. Improved load times by 100x by redesigning the query layer and containerized and deployed the full stack on AWS with Docker.

Student Software Developer - Odense

February 2024 - August 2025 • 1 year 7 months
Contributed to the architecture behind Production Intelligence V4, prototyping the data ingestion pipeline and evaluating columnar storage formats that later cut storage costs by 92%. Worked across the backend stack in a live production environment, translating MSc coursework in distributed systems into real engineering.

Novo Nordisk A/S
6 months

Student Software Developer - Hillerød

September 2022 - February 2023 • 6 months
At Novo Nordisk I developed and implemented a pipeline to render synthetically generated images which were used to train two deep learning models for object detection and 6DoF pose estimation for components in a bin. An open-source recreation is available at <https://github.com/hansaskov/BlenderBin>

EFFIMAT
1 year 1 month

Software Developer - Odense

February 2022 - February 2023 • 1 year 1 month
As a member of the Effimat team, I honed my skills within the field of Internet of Things, by working with data collection and analysis of distributed systems. A website was then developed to show real-time data, which was used to gain insight of their products.

Education

Southern University of Denmark
5 years 5 months

MSc in Software Engineering - Odense

2023 - 2025 • 2 years
Specialization in distributed systems and backend engineering, with electives in cybersecurity, data security and biometric security.

BEng in Robotic Systems - Odense

2019 - 2023 • 3 years 5 months
Robotics introduced my love for software and mathematics, this includes control theory, computer vision, and ML. A key project was to program a UR5 robot arm to detect, grasp and throw objects using collision-aware motion planning.
