Senior Developer for our Software Department

We are looking for a senior developer to join our software department. Do you want to build software that makes logistics solutions, automation systems and production lines work together? Do you want to own projects from the first conversation with the customer to a solution in operation? Do you want to help shape how we use AI in our development work? Then you might be our new senior developer.

Location	Riberdyb 26, 6000 Kolding
Employment	Full-time, 37 hours/week with flexible working hours
Start date	As soon as possible or by agreement
Application deadline	Interviews will be held on an ongoing basis

About the position

You will play a key role in our high-level software department, where we develop software and data solutions for customers in industries such as warehousing and logistics, e-commerce, manufacturing, pharma, renewable energy and food production. You will collaborate with our other departments – Transport & Logistics and Automation – working closely with both developers and engineers. The role combines development with project and customer responsibility. You will be involved from requirements clarification and quotation, through development and testing, to commissioning and ongoing support. Throughout the process, you will be the customer's dedicated point of contact within your area.

Your responsibilities:

- Developing software and data solutions for customer projects, both frontend and backend
- Designing databases and integrations between systems
- Integrating software and automation, e.g. WMS/WCS, MES systems and PLC controls
- Clarifying requirements with the customer and preparing solution proposals
- Time estimation, documentation and preparation of quotes
- Project ownership and acting as the customer's dedicated point of contact
- Testing, commissioning and handover to the customer
- Support and further development of solutions in operation
- Active use of AI for coding, testing, documentation and analysis, as well as sharing best practices across teams

Your profile

You are approachable, thrive on close collaboration with both customers and colleagues, and take ownership of your work. You have a structured approach and are keen to share your knowledge and help develop both the team and the way we work.

We imagine that you:

- Hold a degree in engineering, an MSc in IT or have a similar background, along with several years of experience as a developer

- Have solid experience with C#/.NET, databases and web technologies such as JavaScript, TypeScript, HTML and CSS
- Have a background in consulting and are used to customer contact, project management and estimation
- Are curious about AI and motivated to find new ways of working smarter
- Take initiative and focus on solutions rather than limitations
- Speak and write English fluently

It is an advantage if you have experience with:

- WMS/WCS or MES systems
- PLCs and common interfaces such as OPC UA, Modbus TCP, Profinet or telegram-based communication over TCP/IP
- Cloud platforms, e.g. Microsoft Azure

We offer:

- An informal yet professional work environment where specialists in software and automation share knowledge and work together as a team
- Varied tasks in collaboration with our other departments, across a wide range of industries
- Influence on your tasks and on how we work – including how we use AI
- Professional and personal development with ongoing sparring and feedback
- A 37-hour work week with flexible hours and the option to work from home by agreement
- Company laptop and phone, fresh fruit, free coffee, hot chocolate, tea and soft drinks, an active staff association, social events, in-house lunch arrangements and a shared games room with a racing simulator, table tennis, darts and more

About Techsoft

We are an automation company based in Kolding, Denmark. We combine automation, software, data analytics, AI and system integration in solutions that make industrial production and intralogistics more connected and efficient. Techsoft was founded in 1991 and has been an independent company since 2020. We work at the intersection of automation, software and logistics and are organised into three departments: Software, Transport & Logistics, and Automation.
