Odense C, 5000, Denmark

Languages

Danish
English

Skills

AWS Backend DevOps
Docker Grafana Linux
PostgreSQL Systems
Typescript

About me

My hobbies includes tinkering with homeservers and jogging along Odense River.

DevOps Engineer

I'm Hans, a software engineer with a DevOps mindset and hands-on experience containerizing, deploying, and operating production systems. I have worked with Docker, AWS, Grafana, backend services, and data pipelines, with an emphasis on performance, cost discipline, and systems that can be maintained in production.

Experience

- 

TriVision A/S
2 years 4 months

●

Software Engineer - Odense
February 2024 - May 2026 • 10 months
Shipped Production Intelligence V4, a production analytics platform ingesting 420M+ machine vision inspections annually across TriVision's customer base. Improved load times from 10s to 0.1s by rendering and caching static pages on the server periodically. Then i and containerized and deployed the full stack on AWS with Docker.
- **Student Software Developer - Odense**
February 2024 - August 2025 • 1 year 7 months
Contributed to the architecture behind Production Intelligence V4, prototyping the data ingestion pipeline and evaluating columnar storage formats that later cut storage costs by 92%. Worked across the backend stack in a live production environment, translating MSc coursework in distributed systems into real engineering.
- 

Novo Nordisk A/S
6 months

●

Student Software Developer - Hillerød
September 2022 - February 2023 • 6 months
At Novo Nordisk I developed and implemented a pipeline to render synthetically generated images which were used to train two deep learning models for object detection and 6DoF pose estimation for components in a bin. An open-source recreation is available at <https://github.com/hansaskov/BlenderBin>
- 

EFFIMAT
1 year 1 month

●

Software Developer - Odense
February 2022 - February 2023 • 1 year 1 month
As a member of the Effimat team, I honed my skills within the field of Internet of Things, by working with data collection and analysis of distributed systems. A website was then developed to show real-time data, which was used to gain insight of their products.

Education

- 

Southern University of Denmark
5 years 5 months

●

MSc in Software Engineering - Odense
2023 - 2025 • 2 years
Specialization in distributed systems and backend engineering, with electives in cybersecurity, data security and biometric security.
- **BEng in Robotic Systems - Odense**
2019 - 2023 • 3 years 5 months
Robotics introduced my love for software and mathematics, this includes control theory, computer vision, and ML. A key project was to program a UR5 robot arm to detect, grasp and throw objects using collision-aware motion planning.
