AWS Backend Cybersecurity
 Data Pipelines Docker IoT
 PostgreSQL Python Typescript

About me

My hobbies includes tinkering with homeservers and jogging along Odense River.

Software Engineer

I'm Hans, a software engineer focused on backend systems and data-heavy applications. I shipped Production Intelligence V4, a platform that ingests 420M+ machine vision inspections a year, and cut its dashboard load times from 10s to 0.1s and its storage costs by 92%.

Experience

TriVision A/S
2 years 4 months

Software Engineer - Odense
August 2025 - May 2026 • 10 months
Shipped Production Intelligence V4, a platform that ingests 420M+ machine vision inspections a year. Cut dashboard load times from 10s to 0.1s by rendering and caching pages on the server. Containerized the stack and deployed it on AWS with Docker.

Student Software Developer - Odense
February 2024 - August 2025 • 1 year 7 months
Prototyped the data ingestion pipeline behind Production Intelligence V4 and evaluated columnar storage formats that later cut storage costs by 92%. Shipped backend features in production while finishing my MSc.

Novo Nordisk A/S
6 months

Student Software Developer - Hillerød
September 2022 - February 2023 • 6 months
Built a pipeline that renders synthetic images to train two deep learning models for object detection and 6DoF pose estimation of parts in a bin. Released as the open source project BlenderBin at github.com/hansaskov/BlenderBin.

EFFIMAT
1 year 1 month

Software Developer - Odense
February 2022 - February 2023 • 1 year 1 month
Collected and analyzed data from distributed IoT devices. Built a website that shows the data in real time so the team could monitor their products.

Education

Southern University of Denmark
5 years 5 months

MSc in Software Engineering - Odense
2023 - 2025 • 2 years
Specialized in distributed systems and backend engineering, with electives in cybersecurity and biometric security.

BEng in Robotic Systems - Odense
2019 - 2023 • 3 years 5 months
Found my love for software and mathematics through control theory, computer vision, and machine learning. Programmed a UR5 robot arm to detect, grasp, and throw objects with collision-aware motion planning.
